## Alberta Summary for Period Ending 1st October, 1953.

(Source: Labour Gazette, Volume 53, No. 10, October, 1953)

In September labour market conditions reached the seasonal turning point. During the summer the increase in labour requirements in agriculture, construction and other seasonal industries expanded more rapidly than labour supplies. Compared with a month earlier labour shortage areas had decreased from 9 to 7, all in the prairie region. In the prairie region the main features of the employment situation in September were the reduction in the labour force following the re-opening of schools and universities and the sustained manpower demands in construction and agriculture. This brought the number of workers without jobs and seeking work to its lowest point this year.

Industrial employment in the region in September continued the rapid rise of recent years. At the beginning of August the year to year increase in non-agricultural employment (6%) was three times that for the country as a whole. Construction accounted for well over one-third of the increase, the remainder being spread over manufacturing, transportation, trade and service. Not all three of the prairie provinces shared equally in this employment increase; almost two-thirds of it occurred in Alberta.

Construction programmes in many areas felt the impact of the seasonal demand for labour in agriculture which reached its peak level during August and early September.

There was no change in labour market classification of local areas during the month of September. Virtually no change occurred in the employment situation in Calgary and Edmonton. The high employment levels in the Edmonton area resulting from industrial growth, continued. The construction employment index in this city has reached 1238.6 by the end of August (1939 = 100) an increase of 43% over the year. Labour shortages eased slightly during September as the Canadian Chemical Company and Canadian Industries Ltd. plants neared completion but the total amount of construction work in progress indicated that the period of high activity would be extended to the limit permitted by the weather. The labour market in Calgary, Lethbridge, Drumheller and Medicine Hat was in approximate balance. There were labour shortages felt in Edmonton and Red Deer.

### Employment and Payrolls

The Dominion Bureau of Statistics collects monthly data from firms, usually having 15 or more employees. Data are requested for all classes of employees, irrespective of their functions in the business; statistics for the owners are not included. Employees engaged in agriculture, government, and educational services are excluded. Wages represent gross earnings before deductions for unemployment insurance, taxes, pension funds, etc. are made. They also include the cost-of-living bonus, made at frequent intervals. They exclude value of board and lodging, employers' contributions to unemployment insurance, workmen's compensation and pension and welfare funds as well as bonuses paid at irregular or infrequent intervals such as annual bonuses and retirement gratuities. The following tables compare the employment and wage situations as at 1st of September, 1953, with that existing one year earlier in the main non-agricultural industries of the province of Alberta. Figures for the cities of Calgary and Edmonton are shown as well.

At SEPTEMBER 1, 1953, as Compared with Corresponding Date in 1952.

| | Index Numbers (1939 = 100) | | | | Average Weekly Wages and Salaries | | Employees Reported |
